Vidhyaverse

AN AI BASED PERSONALIZED LEARNING PLATFORM

PROBLEM STATEMENT

01.

Great Teachers Are Time-Bound. Learning Shouldn't Be.

02.

live tutoring = expensive + scarce

03.

every students adapts to different teaching styles.

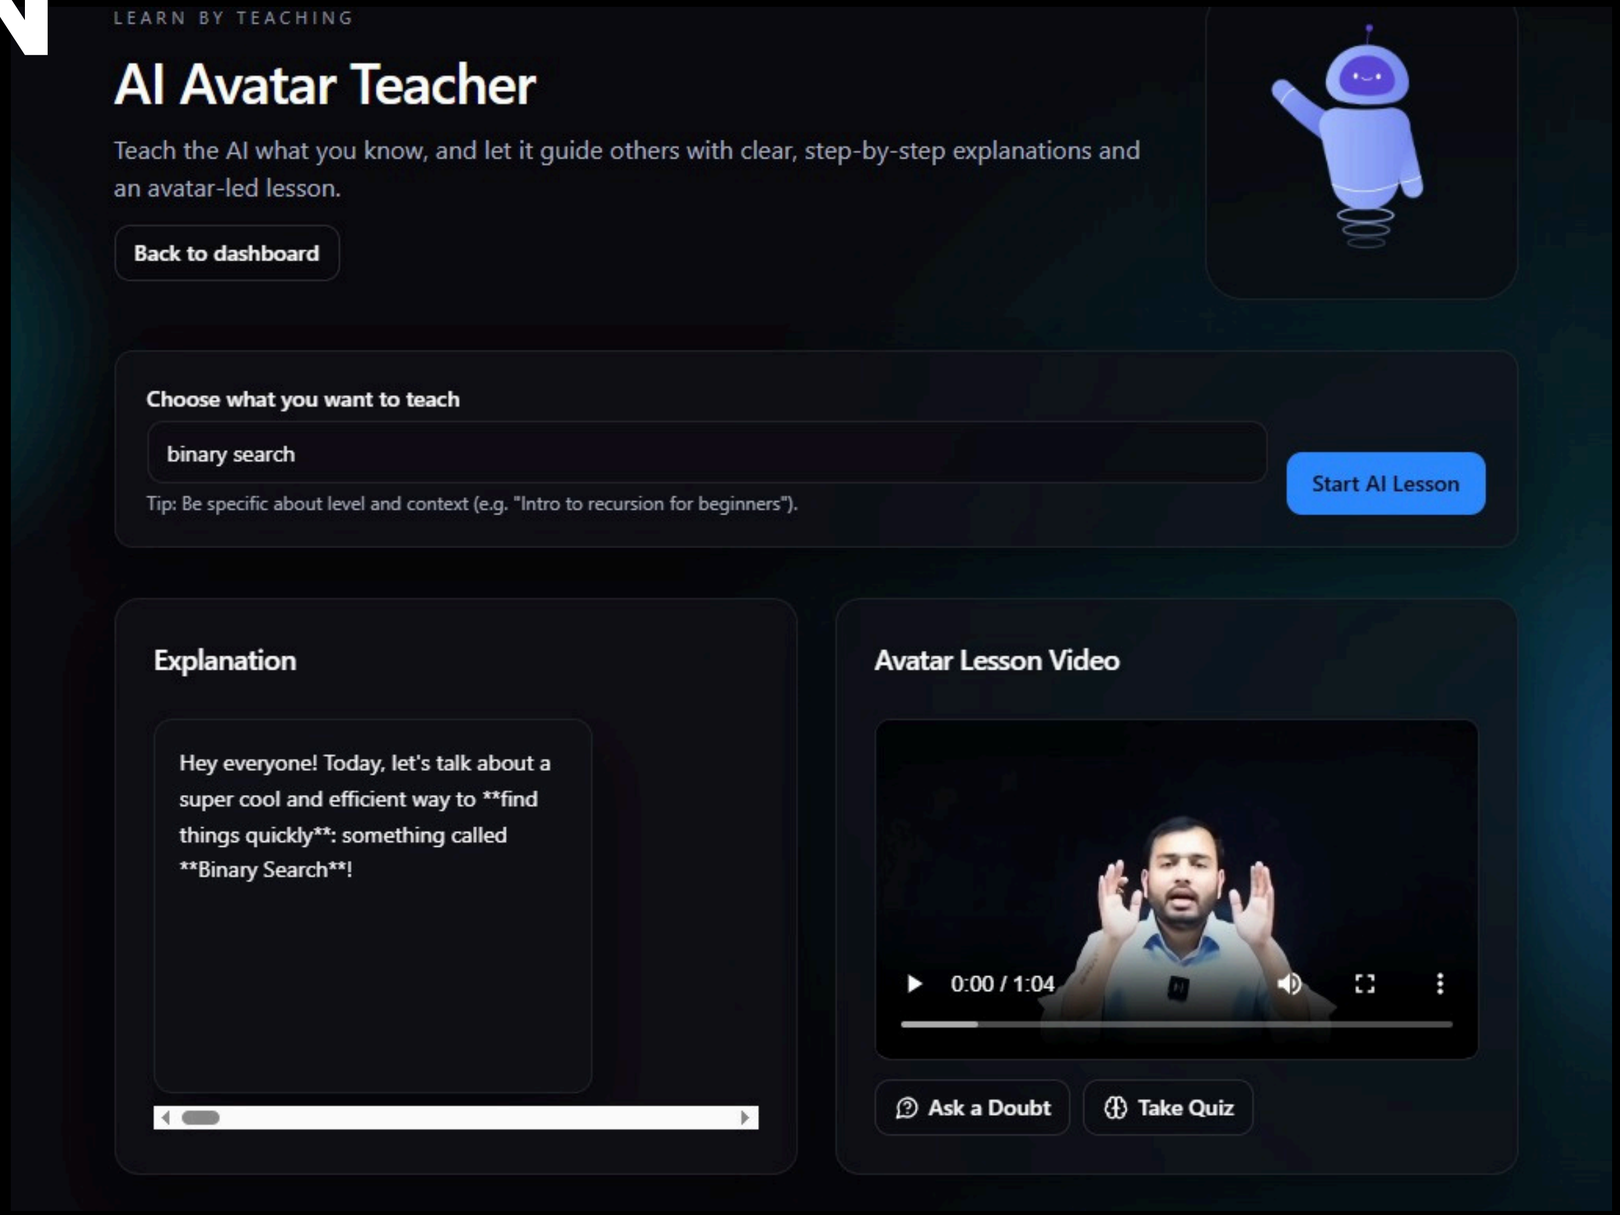

04.

A good teacher is a human too and cannot be available 24/7.

Your teacher . Their method . Available - on demand .

SOLUTION

"We convert a teacher's teaching style into an AI-powered avatar that teaches exactly like them when they're unavailable."

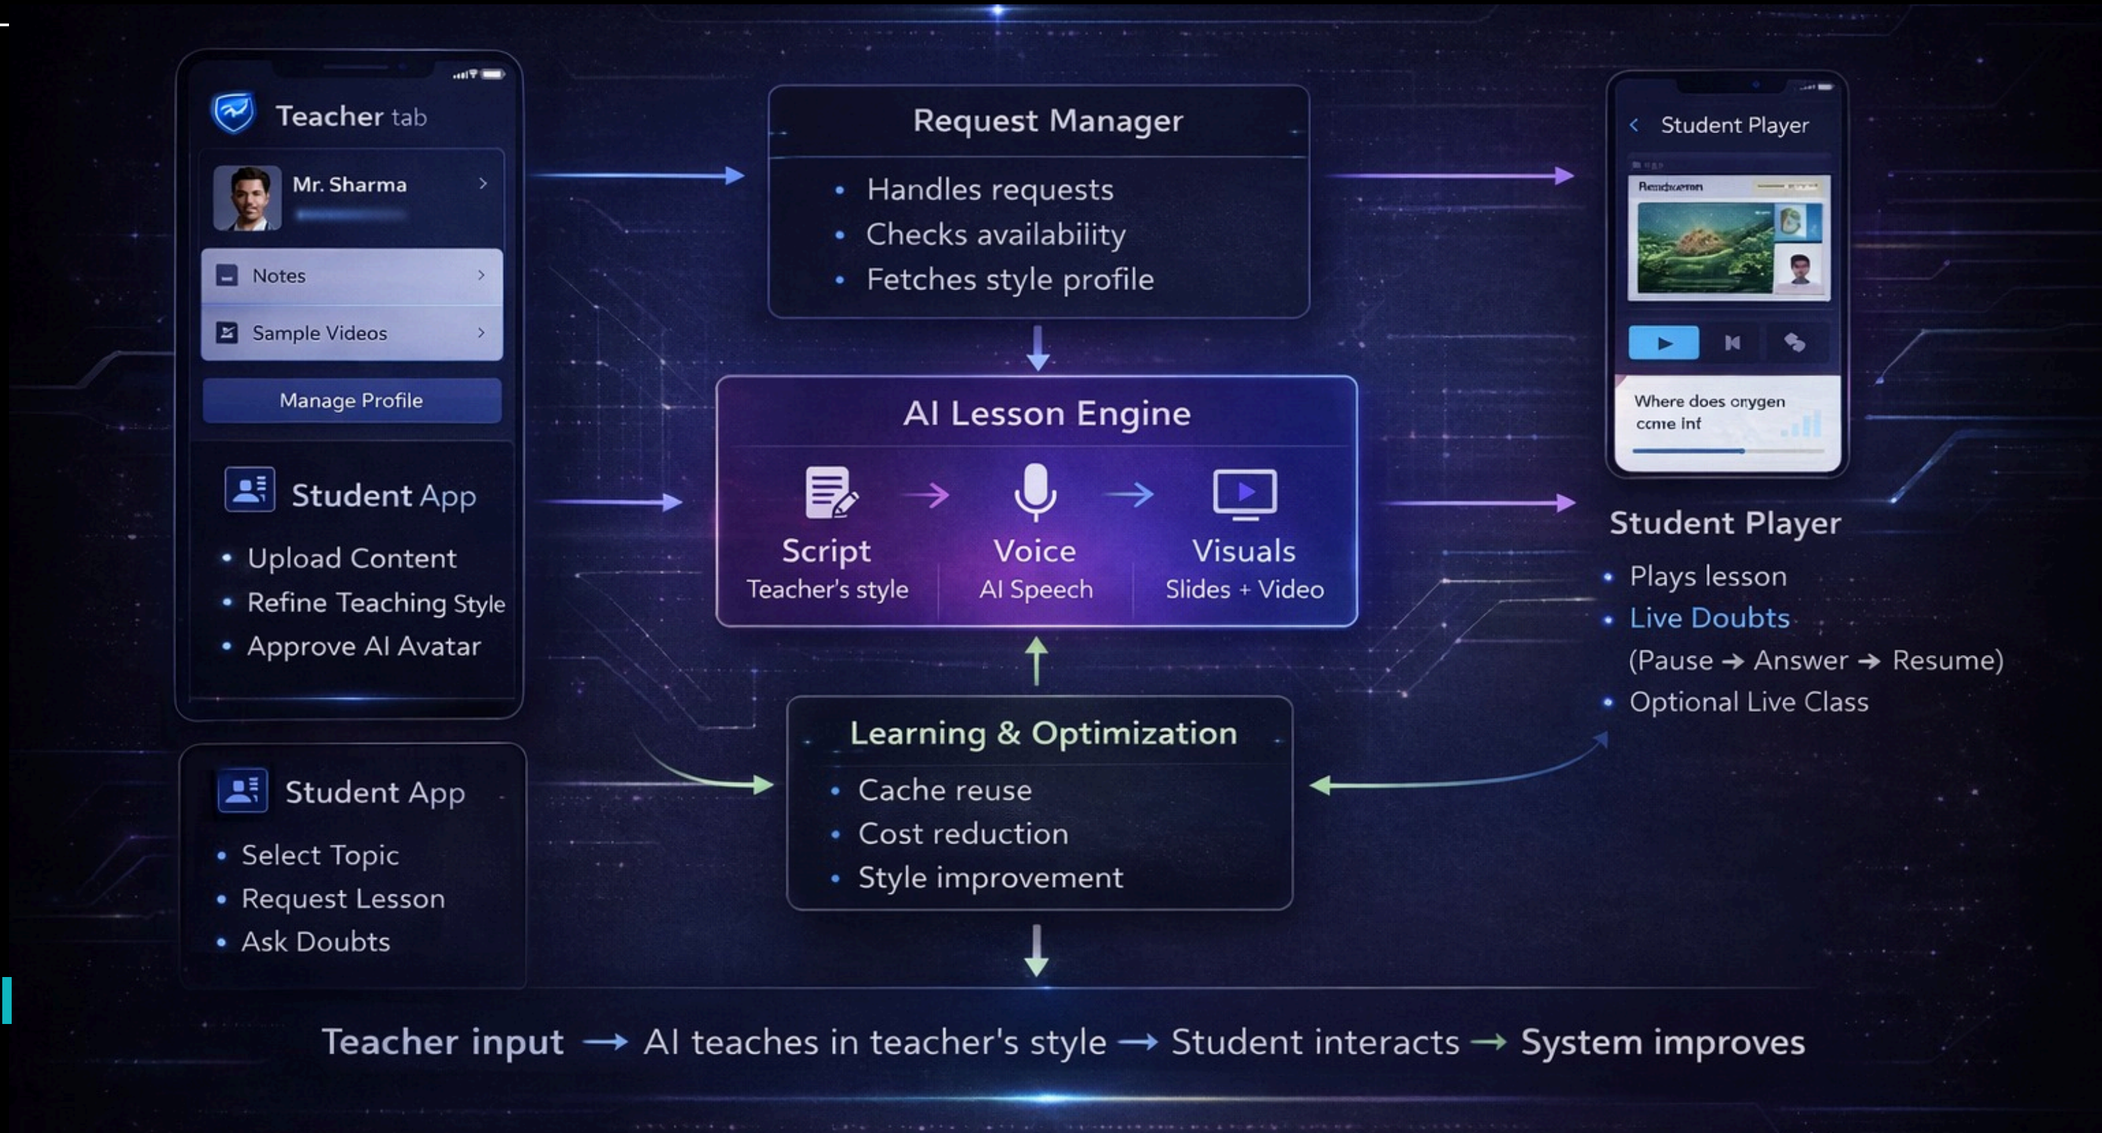

CORE SYSTEM ARCHITECTURE & CONCEPT

Teaching Style Profiling

Lesson Generation Pipeline

Real-Time Redirection Logic

In-Lesson Contextual Q&A

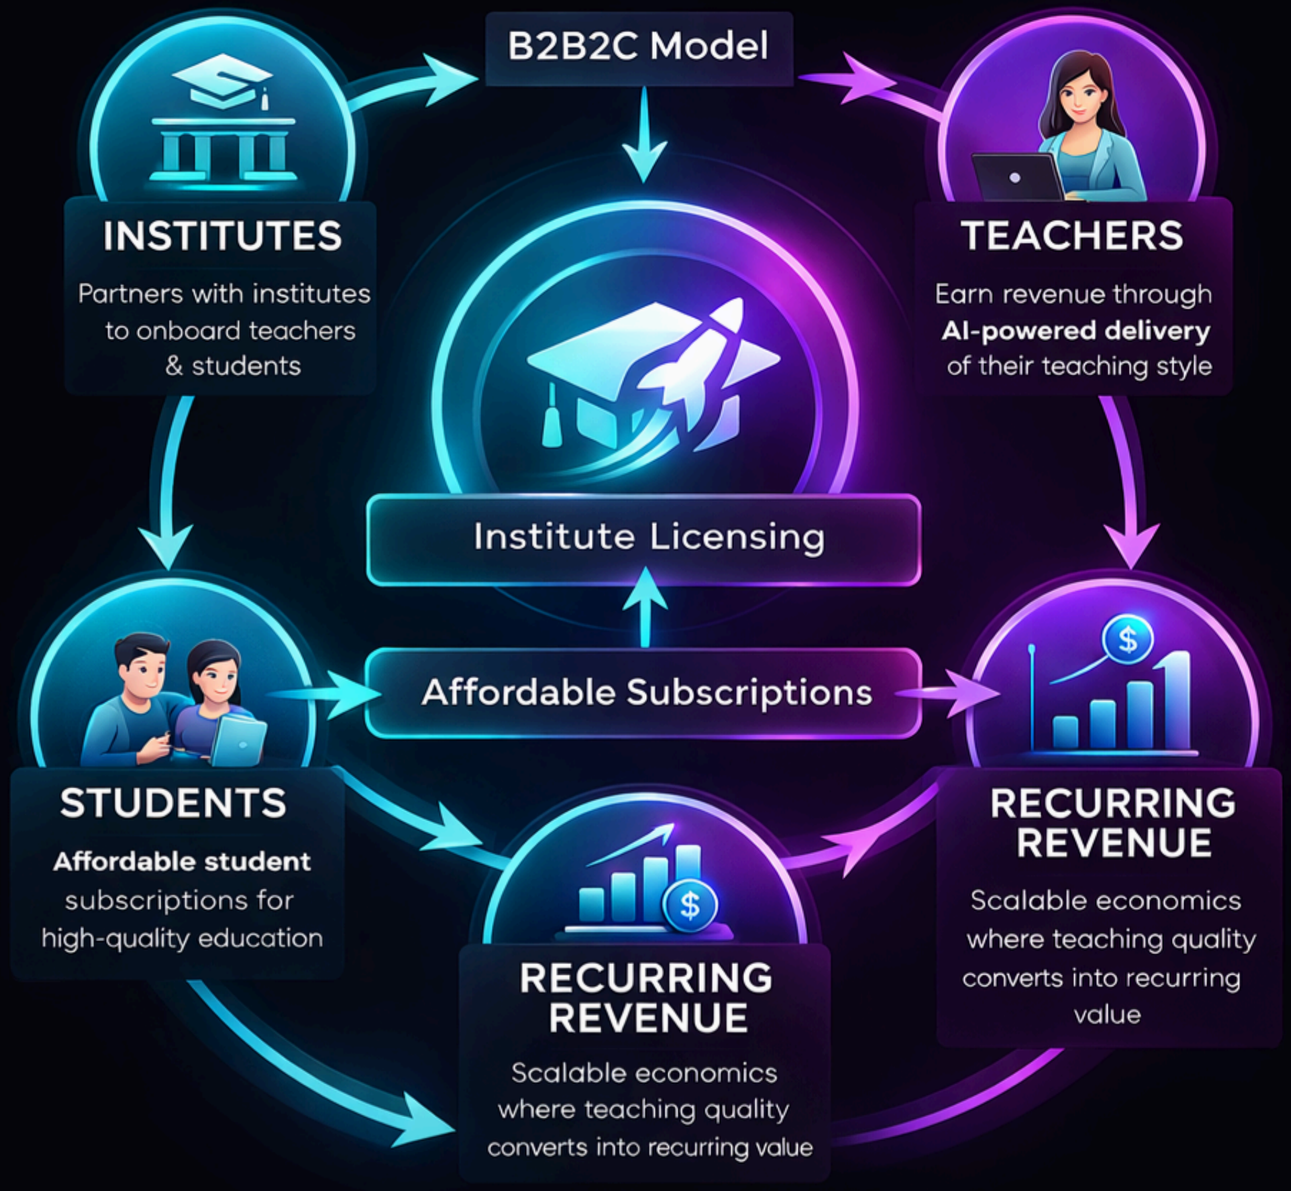

Why Existing Solutions Fall Short ??

- Video Platforms: Generic, non-interactive, no pedagogical continuity
- Live Tutoring: High cost, limited availability, non-scalable
- AI Tutors: Fast but impersonal, break learning flow and trust

BUSINESS MODEL

- Revenue from institute licensing and affordable student subscriptions
- Teachers earn revenue through AI-powered delivery of their teaching style
- B2B2C model partnering with institutes to onboard teachers and students

MARKET INSIGHTS & SCALABILITY

- Education has scaled content and access, but not trusted pedagogy
- Students learn best when teaching style remains consistent
- No existing platform preserves a teacher’s method beyond live hours
- Teaching styles are created once and reused at scale
- Lessons are generated once per teacher-topic and cached
- As adoption increases, costs fall and margins improve

"We are building a future where great teaching is no longer limited by time, location, or availability."

VISION & IMPACT

“THE FUTURE OF EDUCATION BELONGS TO TEACHING THAT NEVER LEAVES THE STUDENT.”

THANKYOU
